

Rubric for Item 3, 2026 S1 (Tertiary Year 12)					
Student: Willow Woods					
Criteria	Grade: A	Grade: B	Grade: C	Grade: D	Grade: E
Knowledge: Flask Routing and Request-Response Concepts	You critically analysed Flask routing and request-response concepts and evaluated how route handling, template rendering, browser requests, and returned responses support reliable and maintainable web application behaviour.	You analysed Flask routing and request-response concepts and explained how route handling, template rendering, browser requests, and returned responses support web application behaviour.	You explained Flask routing and request-response concepts and described how route handling, template rendering, browser requests, or returned responses support website functionality.	You described Flask routing or request-response concepts with some reference to route handling, templates, or returned responses.	You identified some features of Flask routing or request-response concepts with minimal reference to website functionality.
Knowledge: HTML Structure and Responsive Interface Principles	You critically analysed HTML structure and responsive interface principles and evaluated how semantic elements, navigation systems, responsive layouts, audience-focused content, and page organisation improve communication, usability, and accessibility.	You analysed HTML structure and responsive interface principles and explained how semantic elements, navigation systems, responsive layouts, audience-focused content, and page organisation improve usability and accessibility.	You explained HTML structure and responsive interface principles and described semantic elements, navigation systems, responsive layouts, or page organisation.	You described HTML structure or responsive interface principles with some reference to semantic elements, navigation systems, or page organisation.	You identified some features of HTML structure or responsive interface principles with minimal reference to usability or communication.
Knowledge: CSS Styling and Selector Behaviour	You critically analysed CSS styling and selector behaviour and evaluated how selectors, typography, spacing, colour palettes, hover effects, and style precedence influence readability, usability, and visual consistency.	You analysed CSS styling and selector behaviour and explained how selectors, typography, spacing, colour palettes, hover effects, and style precedence influence readability and usability.	You explained CSS styling and selector behaviour and described selectors, typography, spacing, colour palettes, hover effects, or style precedence.	You described CSS styling or selector behaviour with some reference to typography, colour palettes, hover effects, or style precedence.	You identified some features of CSS styling or selector behaviour with minimal reference to readability or visual consistency.
Knowledge: JavaScript Interaction and Website Usability Concepts	You critically analysed JavaScript interaction and website usability concepts and evaluated how event handling, dynamic content updates, user input processing, and form interactions improve usability, accessibility, and maintainability.	You analysed JavaScript interaction and website usability concepts and explained how event handling, dynamic content updates, user input processing, and form interactions improve usability and accessibility.	You explained JavaScript interaction and website usability concepts and described event handling, dynamic content updates, user input processing, or form interactions.	You described JavaScript interaction or website usability concepts with some reference to event handling, dynamic content updates, or user input processing.	You identified some features of JavaScript interaction or website usability concepts with minimal reference to usability or accessibility.

Criteria	Grade: A	Grade: B	Grade: C	Grade: D	Grade: E
Knowledge: Form Processing and User Experience Principles	You critically analysed form-processing and user-experience principles and evaluated how user input handling, feedback, navigation consistency, interface refinement, and audience requirements support effective and reliable website experiences.	You analysed form-processing and user-experience principles and explained how user input handling, feedback, navigation consistency, interface refinement, and audience requirements support effective website experiences.	You explained form-processing and user-experience principles and described user input handling, feedback, navigation consistency, or interface refinement.	You described form-processing or user-experience principles with some reference to user input handling, feedback, or navigation consistency.	You identified some features of form-processing or user-experience principles with minimal reference to website experiences.
Skill: Flask Website Development	You applied technology concepts, strategies, and methodologies with control and precision to create innovative and high-quality Flask website solutions using routing, template rendering, and structured application design.	You applied technology concepts, strategies, and methodologies with control to create high-quality Flask website solutions using routing, template rendering, structured application design, and organised code structure.	You applied technology concepts, strategies, and methodologies with some control to create functional Flask website solutions using routing and template rendering.	You applied technology concepts, strategies, and methodologies with minimal control to create simple, functional Flask website solutions with some correct routing or rendering behaviour.	You applied limited technology concepts or methodologies with minimal evidence of correct Flask routing or rendering behaviour.
Skill: HTML Structure and Navigation Development	You created innovative and high-quality website solutions using semantic HTML structures, responsive layouts, navigation systems, hero sections, and audience-focused content organisation.	You created high-quality website solutions using semantic HTML structures, responsive layouts, navigation systems, hero sections, and organised content structure.	You created functional website solutions using semantic HTML structures, responsive layouts, navigation systems, or content organisation.	You created simple, functional website solutions using some semantic HTML structures, responsive layouts, or navigation systems.	You created simple website solutions using basic semantic HTML structures, responsive layouts, or navigation systems.
Skill: CSS Styling and Interface Development	You applied design methodologies with control and precision to create innovative and high-quality website interfaces using selectors, typography, spacing, colour palettes, hover effects, and consistent visual styling techniques.	You applied design methodologies with control to create high-quality website interfaces using selectors, typography, spacing, colour palettes, hover effects, and consistent visual styling techniques.	You applied design methodologies with some control to create functional website interfaces using selectors, typography, spacing, colour palettes, or hover effects.	You applied design methodologies with minimal control to create simple, functional website interfaces with some correct styling behaviour.	You applied limited design methodologies with minimal evidence of appropriate website styling.

Criteria	Grade: A	Grade: B	Grade: C	Grade: D	Grade: E
Skill: JavaScript and Dynamic Interaction Development	You applied programming methodologies with control and precision to create innovative and high-quality interactive website solutions using event handling, dynamic content updates, user input processing, and responsive interactions.	You applied programming methodologies with control to create high-quality interactive website solutions using event handling, dynamic content updates, user input processing, and responsive interactions.	You applied programming methodologies with some control to create functional interactive website solutions using event handling, dynamic content updates, or user input processing.	You applied programming methodologies with minimal control to create simple, functional interactive website solutions with some correct event-handling or input-processing behaviour.	You applied limited programming methodologies with minimal evidence of correct event-handling or input-processing behaviour.
Skill: Form Processing and Website Refinement	You applied technology concepts, strategies, and methodologies with control and precision to create innovative and high-quality website refinements using form processing, interface feedback, navigation consistency, and audience-focused improvements.	You applied technology concepts, strategies, and methodologies with control to create high-quality website refinements using form processing, interface feedback, navigation consistency, and audience-focused improvements.	You applied technology concepts, strategies, and methodologies with some control to create functional website refinements using form processing, interface feedback, or navigation consistency.	You applied technology concepts, strategies, and methodologies with minimal control to create simple, functional website refinements with some correct form-processing or feedback behaviour.	You applied limited technology concepts or methodologies with minimal evidence of correct form-processing or website refinement behaviour.
